Out−of−sample summary −− recursive Campbell−Thompson R^2 by phase

Phase	Specification	In−sample R2 (mean)	OOS R2 (pooled)	Markets OOS+
I −− local	rx ~ CF	0.247	−0.076	2/11
II −− global	rx ~ GCF	0.247	0.046	10/11
III −− USD, global	rx_USD ~ GCF	0.080	−0.071	2/11
III −− USD, FX−adj.	rx_USD ~ FXGCF	0.095	0.002	9/11

In−sample R2 is the cross−country mean of the single−factor fits (Eq 18, 20, 22, 23). OOS R2 is the pooled Campbell−Thompson (2008) R2 of the fully−recursive factor forecast against the recursive prevailing mean (Eq meth−ctr2); 'Markets OOS+' counts markets with positive OOS R2. The factor and the forecasting regression both respect time t (doubly out−of−sample). Detail in Ch.8.
