

Robustness -- In-sample predictability across subsamples

Subsample	Months	rx ~ CF : R2	rx ~ CF : t	rx ~ GCF : R2	rx ~ GCF : t	rx_USD ~ GCF : R2	rx_USD ~ GCF : t	rx_USD ~ FXGCF : R2	rx_USD ~ FXGCF : t
Full sample	412	0.247	17.03	0.247	14.26	0.080	6.20	0.143	7.99
Pre-crisis (..2007:06)	210	0.237	10.21	0.164	9.92	0.120	4.72	0.300	7.42
Financial crisis (2007-09)	30	0.176	1.70	0.054	1.89	0.051	1.54	0.121	-2.47
Euro crisis (2010-12)	36	0.506	6.75	0.386	2.41	0.258	1.45	0.266	0.72
Post-crisis (2013-)	136	0.133	6.62	0.234	12.02	0.035	-2.53	0.037	-1.69

Each cell pair reports the cross-country mean single-factor in-sample R2 and the pooled fixed-effects Newey-West HAC t on the factor, estimated on the indicated subsample (dated by forecast-origin month). rx = local-currency, rx_USD = US-dollar maturity-averaged 1y excess return. CF/GCF are the local and global cycle factors; FXGCF the FX-adjusted global factor. 'Months' is the number of forecast origins in the window. Crisis windows are short, so HAC t-stats there are necessarily noisier than in the full sample.
