

Robustness -- Core vs headline (regular) CPI: in-sample

Country	N	corr trend	corr factor	R2 core	R2 reg	dR2	t core	t reg
Belgium	353	0.61	0.96	0.305	0.312	−0.007		
Germany	352	0.90	0.96	0.261	0.241	0.019		
France	352	0.90	0.89	0.128	0.186	−0.058		
Italy	352	0.98	0.95	0.285	0.246	0.040		
Netherlands	353	0.78	0.92	0.344	0.308	0.036		
Switzerland	353	0.98	0.96	0.074	0.057	0.017		
UK	352	0.95	0.99	0.264	0.236	0.028		
Sweden	352	0.99	0.99	0.241	0.251	−0.009		
Canada	352	0.85	0.97	0.329	0.301	0.029		
Japan	366	0.98	0.97	0.185	0.197	−0.012		
US	412	0.93	0.87	0.330	0.237	0.093		
Mean (CF)	359	0.90	0.95	0.250	0.234	0.016		
GCF	412		0.92	0.252	0.224	0.028	14.25	14.44
FXGCF	412		0.93	0.096	0.072	0.025	6.80	5.12

Trend inflation, the cycle, and the factors rebuilt from REGULAR (all-items) CPI instead of CORE CPI, compared on the per-country common sample.

'corr trend'/'corr factor' are core-vs-regular correlations; 'R2 core'/'R2 reg' are in-sample predictive fits of rx on the factor (HAC t in 't core'/'t reg');

'dR2' = R2 core − R2 reg (positive = core fits better, as in Cieslak–Povala 2015, Table 10 Panel C4). CF rows are per country; 'Mean (CF)' averages them; GCF and

FXGCF are the global factors (cross-country mean R2, pooled fixed-effects HAC t). rx is local-currency for CF/GCF and US-dollar for FXGCF.
