$y_t(n) = a_n + b_n \tau_t^{\text{CPI}} + e_t$, by maturity. US, 1989m3–2014m12. Newey–West t-stats (18 lags).

a_n in basis points. Sample is shorter than CP 2015 (1975–2014), so intercept levels differ; slopes and R2 align.
