

Robustness -- Core vs headline (regular) CPI: in-sample

Country	N	corr trend	corr factor	R2 core	R2 reg	dR2	t core	t reg
Belgium	353	0.60	0.96	0.301	0.309	−0.007		
Germany	353	0.91	0.95	0.256	0.232	0.024		
France	353	0.90	0.90	0.126	0.176	−0.050		
Italy	353	0.98	0.95	0.287	0.243	0.043		
Netherlands	353	0.78	0.91	0.344	0.304	0.039		
Switzerland	353	0.98	0.96	0.073	0.055	0.018		
UK	353	0.96	0.99	0.262	0.231	0.031		
Sweden	353	0.99	0.99	0.238	0.242	−0.004		
Canada	353	0.85	0.97	0.320	0.290	0.031		
Japan	367	0.98	0.97	0.185	0.197	−0.012		
US	412	0.94	0.87	0.326	0.229	0.097		
Mean (CF)	360	0.90	0.95	0.247	0.228	0.019		
GCF	412		0.92	0.247	0.214	0.033	14.26	14.50
FXGCF	412		0.93	0.095	0.068	0.027	6.74	4.97

Trend inflation, the cycle, and the factors rebuilt from REGULAR (all-items) CPI instead of CORE CPI, compared on the per-country common sample.

'corr trend'/'corr factor' are core-vs-regular correlations; 'R2 core'/'R2 reg' are in-sample predictive fits of rx on the factor (HAC t in 't core'/'t reg');

'dR2' = R2 core − R2 reg (positive = core fits better, as in Cieslak-Povala 2015, Table 10 Panel C4). CF rows are per country; 'Mean (CF)' averages them; GCF and

FXGCF are the global factors (cross-country mean R2, pooled fixed-effects HAC t). rx is local-currency for CF/GCF and US-dollar for FXGCF.
