

Robustness -- Core vs headline CPI: out-of-sample R²_oos

Specification	OOS R2 core	OOS R2 reg	difference
rx ~ CF	−0.076	−0.065	−0.011
rx ~ GCF	0.046	−0.015	0.061
rx_USD ~ FXGCF	0.002	−0.163	0.165

Pooled Campbell–Thompson R²_oos of the fully–recursive factor against the recursive prevailing mean, with the entire chain rebuilt on regular CPI. Each column is scored over its own available sample (the regular series is shorter, e.g. Japan ends 2021). 'difference' = core – regular.
